

Steel structure fabrication capability increased

[17/05/2017]

EEC has completed commissioning of the built-up section fabrication production facility.

The facility operates with the latest Beam Welding technologies from Europe and the USA. The facility is able to produce up to 500 metric tons per shift.

The line will be supported by a number of other critical equipment including:

- Overhead crane systems for ease of handling
- Oxy & Plasma cutting machines from Germany
- Sand blasting equipment for per-surface treatment
- Drilling & punching machines using Spanish technology
